Comments:

This application list is only valid for type identification.
This catalogue supersedes all previous catalogues.
We do not accept any responsibility in respect of legal claims arising out of the contents of this list.
Spark Plug recommendations regarding FAA guidelines for aeroplane power units are not included in this edition.

The spark plugs, glow plugs, and caps listed in our Catalogue can be used in the engines which we recommend in our catalogue.
Recognizable mistakes, such as printing errors are subject to careful scrutiny by the user. NGK safeguards for accuracy and the mentioned characteristics in accordance with the current state of the art technology.
Basic condition for this is the proper use of the NGK product.
The seller's warranty period for faults in material or unsatisfactory performance is 24 months from the date of purchase, provided the prescribed interval changes from the vehicle manufacturer are adhered to.
Excluded from this is normal wear and tear and any form of racing activities.

1) ISO:The length from gasket to terminal of ISO type spark plugs is 50.5mm which is 2.5mm shorter than BCP-E or BC-E type spark plugs.
2) Resistor spark plugs are recommended for cars originally equipped with resistor spark plugs.When nonresistor spark plugs are installed in such cars, there is some possibility that the electric devices in the car, such as theaudio system or the engine managemant system, would be affected by noise.
3) Marked * part number will be discontinued when the current stock is over.

Choosing a racing plug

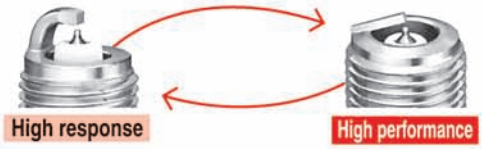

Choose the right spark plug for your engine based on heat range and electrode design, engine tuning, and racing conditions.

Heat range

Electrode design

•Engine tuning •Torturous racing conditions
•Avoid problems due to extremes of temperature

•Low-speed performance

Racing plugs for both two- and four-wheel vehicles have been developed and designed for use in engines that have been fine-tuned to achieve maximum power under specific racing conditions. Racing plugs differ from standard plugs, both in appearance and performance, and often sacrifice plug life, and efficiency at low-speeds for optimum performance and durability under torturous racing conditions.

What to look for when choosing a racing plug

Point 1 Shell design – To determine what kind of shell design fits in your engine, check the serial number of regulation plugs or the plugs you are currently using to verify the thread diameter, pitch, thread length and shell seat.

Point 2 Firing End design – Refer to the section below on electrode design to determine which type is best for your needs.

Point 3 Heat range – It's important to choose a racing plug with a heat range that keeps the electrode at an optimum temperature under even the most torturous racing conditions. And remember: A higher heat-range number does not improve engine performance, it increases the plug's ability to dissipate heat.

Point 4 Resistors – Due to advances in ignition-system technology, there is little if any difference in performance between plugs with resistors and those without. However there are still some variations of some models that require plugs with resistors to avoid engine trouble.

Choosing a firing end design

Although a good rule of thumb is that the more an electrode projects into the cylinder, the better ignition it provides, it's also true that longer projections are more susceptible to the wear and tear of extreme temperatures. High-power, high-performance engines, of course, not only run hotter, they also vibrate more, which is why we recommend choosing a firinig end design that reduces exposure of the electrode and insulator as much as possible.

Projected type

Quite similar to a standard spark plug electrode, these plugs give good overall performance in lightly tuned and naturally aspirated engines, as well as good performance in the low to medium torque range in turbo engines.

Angled ground strap type

These provide superior performance in turbocharged engines with power boosts of 50% or more. The short ground electrode is also highly durable against mechanical shock.

Semi-surface discharge

In a sense, this is the ultimate plug configuration. Nearly all insulator cracking and electrode melting can be prevented with this type. Nevertheless, service life and low-speed performance may suffer slightly.

Once you've found a plug that matches your needs, give it a try and feel the exhilaration of getting 120% performance from your engine.

INSTALLATION

To install spark plugs in the engine, first tighten them by fingers, then retighten with the right tightening torques as shown below, using a plug wrench.
Either excessive tightness or looseness will cause troubles. Looseness sometimes causes pre-ignition because heat cannot disperse. On the other hand, excessive tightness can damage the threads of both the cylinder head and the spark plug.

■ Tightening angles

Thread size	New gasket	Used gasket
φ14mm (except※)	$\frac{2}{3}$ of a turn(240°)	$\frac{1}{12}$ of a turn(30°)
φ12mm φ10mm	$\frac{1}{2}$ of a turn(180°)	$\frac{1}{12}$ of a turn(30°)
φ8mm	$\frac{1}{3}$ of a turn(120°)	$\frac{1}{12}$ of a turn(30°)
※ R6469-9 R6918C-9	$\frac{1}{3}$ of a turn(120°)	$\frac{1}{12}$ of a turn(30°)

■ Tightening torques

Spark plug type (thread diameter)		Aluminium cylinder head
Flat seat type (with gasket)	φ14mm	25～30N·m (2.5～3.0kg·m 18.0～21.6 lb·ft)
	φ12mm	15～20N·m (1.5～2.0kg·m 10.8～14.5 lb·ft)
	φ10mm	10～12N·m (1.0～1.2kg·m 7.2～8.7 lb·ft)
	φ 8mm	8～10N·m (0.8～1.0kg·m 5.8～7.2 lb·ft)

What spark plugs have to do during gas combustion

The igniting spark.
The basic facts are: the working principles of fuel ignition remain unchanged. Even in a dual fuel vehicle – powered by petrol or gas – the spark plug's job is to ignite the fuel mixture by means of a spark discharge.

The following is true: liquid gas is harder to ignite than petrol. In addition: liquid gas is more aggressive than petrol, so extremely durable materials are required to resist erosion. It is therefore recommended to use spark plugs which are equal to the special demands of combined operation.

The benefit of iridium:
As the leading supplier and developer of innovative spark plugs and exhaust gas sensors, NGK offers spark plugs which guarantee reliable ignition in converted engines. For many engines, there is a suitable spark plug in the NGK range. These spark plugs have laser welded centre electrodes using the precious metals iridium or platinum.

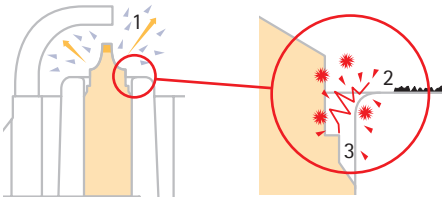

Spark plugs robust enough for dual fuel operation.

- Iridium and platinum are extremely resistant to erosion.
- In gas operation too, they guarantee optimum ignition properties over a long lifetime.
- The use of these precious metals allows a centre electrode with a diameter of only 0.6 mm.
- The ignition voltage requirement is reduced.
- The small diameter of the centre electrode enhances the optimum spread of the flame core in all directions.

In brief: Iridium and platinum spark plugs enable reliable and environmentally friendly ignition – whether using petrol or gas.

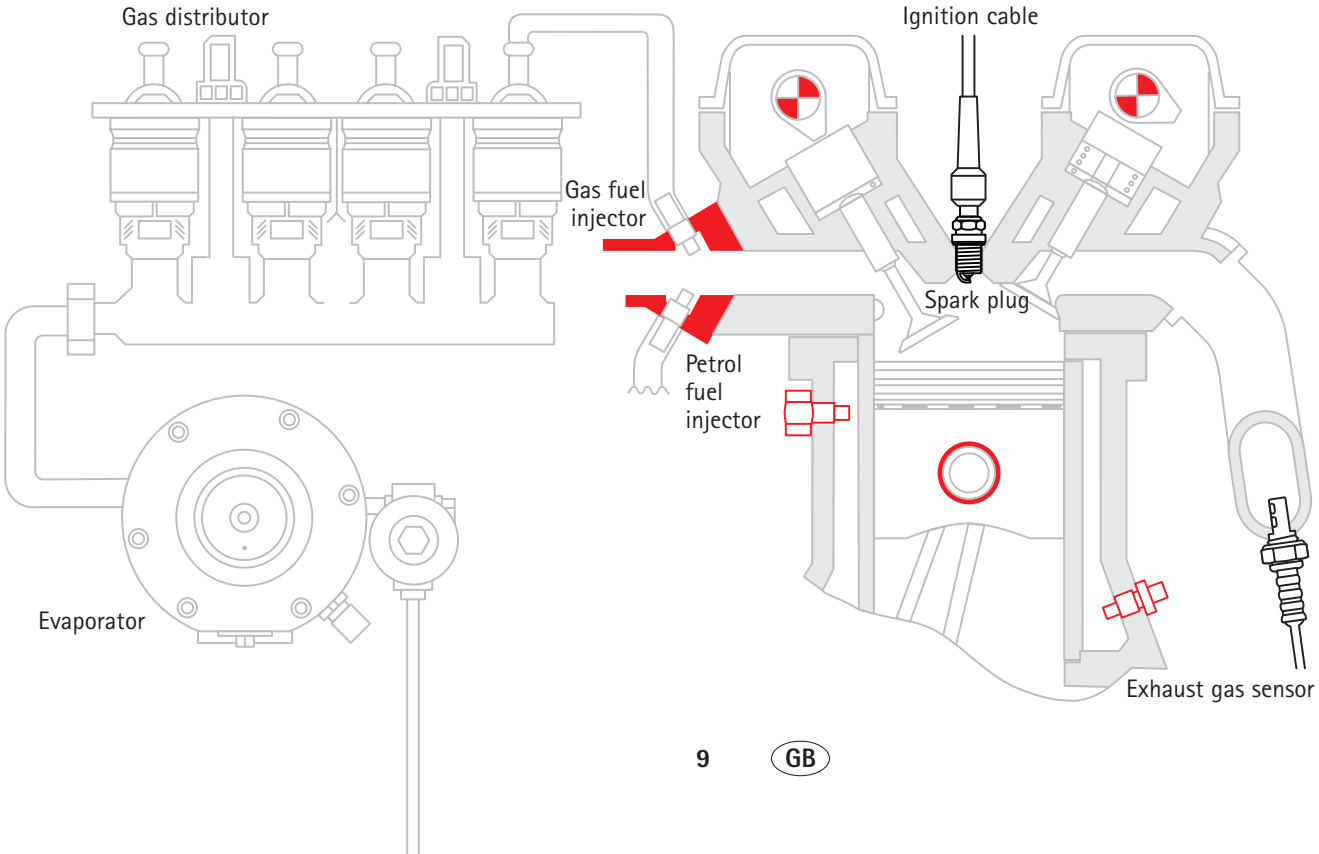

The iridium centre electrode with its iridium tip of only 0.6 mm.

No deposits in the annular gap.
1 Ignition sparks
2 Build-up of deposits
3 The deposits are burnt in the annular gap

How a gas–powered engine functions

Special spark plugs from NGK: Specifically developed for gas operation

Even spread of the flame core

As well as the current iridium types, NGK now also offers special spark plugs for gas-powered vehicles. They are specifically manufactured for use in retro-fitted vehicles and have proven themselves in Japan for many years – for example in taxis, which are without exception gas-powered in that country.

It's the plating that does it.
The spark plugs for use with gas are plated with a chrome alloy specifically developed by NGK for this purpose. It is able to resist the aggressive conditions of gas operation for longer than normal platings. At present for cars there is no other spark plug which can offer a similar plating.

Platinum and iridium: The dynamic duo.
In the same way as with standard iridium and platinum spark plugs, the special spark plugs for gas-powered cars also have a laser welded centre electrode using an iridium chip of only 0.6 mm diameter. In addition, the ground electrode is fitted with a platinum chip which further improves the durability and therefore the lifetime of the spark plug.

An overview of the special spark plugs:
- A particularly long life thanks to a special plating for the metal shell as well as electrodes of platinum and iridium.
- Reliable ignition and an even spread of the flame core.
- The best ignition properties also when operating with gas.
- Low ignition voltage requirement.
- In comparison with standard spark plugs, improved emission values also when operating with gas.

A word on installation.
There is no difference between installing a spark plug in a dual fuel engine and installing one in a normal engine. Before removing the old spark plug, the cylinder head should be cleaned. The new spark plug is then screwed in by hand and then tightened with a torque wrench to the correct torque setting.

In some cases it has proven effective when retro-fitting for gas operation to reduce the electrode gap slightly, 0.3 mm at the most, in comparison to the normal recommendation for petrol operation to facilitate the spark discharge.

Torque settings

	Spark plug with gasket					Spark plug with taper seat	
	18 mm	14 mm	12 mm	10 mm	8 mm	18 mm	14 mm
Cast iron head	34–45 Nm	25–35 Nm	15–20 Nm	10–15 Nm	–	20–30 Nm	15–25 Nm
Aluminium head	34–45 Nm	25–30 Nm	15–20 Nm	10–12 Nm	8–10 Nm	20–30 Nm	10–20 Nm

Iridium spark plug BPR6EIX-LPG

NGK spark plugs: The right solution for the gas powered engine

Three steps to installation:
1. Determine existing spark plug
2. Find the alternative spark plug in the table*
3. If necessary, reduce the electrode gap by 0.3 mm maximum

* **Please note:**
For LPG units based on the venturi system, spark plugs one heat range higher must be used (e.g. BKR5E => BKR6EIX-LPG).
For vehicles already factory fitted with high quality NGK platinum or iridium spark plugs, no other type needs to be used. If necessary adjust the electrode gap.

... a sales concept with many advantages.

1. **Numbering system:**
   Numbers from 1 to 35 make it easy to quickly find the right spark plug.
2. **Attractive packaging:**
   Spontaneous buying, that increases sales.
3. **Compact:**
   Less space demand by compact measurements.
4. **High stock turnover:**
   35 types for 97% of all vehicles.
   This improves your profit.
5. **Special trade distribution:**
   No competition with department stores and supermarkets.
6. **Less costs:**
   Less costs for storing–more profit for you.
7. **Protection of environment:**
   Higher ignition safety. Reduction in fuel consumption, exhaust emission and longer life for catalizer. More customer acceptance. Environmental carton packaging without blisterpack.
8. **Enduser advertisement:**
   NGK takes care of an increase in demand from your customers.

The complete assortment can be clearly represented in a floor display. An integrated application list makes it easy to quickly find the right spark plug.

In addition to application list you can hang the 4 pcs-packaging on the hole-shelf-wall. The number-system (No. 1 to 35) makes it easy to quickly find the right spark plug.

The assortment contains 35 different spark plug types, totalling 700 spark plugs – sorted according to demand and sales.

V-Line Spark Plugs offer advantages of the whole line

1. **Perfect Ignition:**
   Protection for the environment
   The possibility of misfires is reduced to a minimum by the V-line construction. Better combustion of the fuel and improved exhaust gas emissions reduce the impact on the environment.

V-Line No. 1, 21, 22, 24, 27, 29
3 ground electrode spark plugs

V-Line No. 2-12, 14-19, 28, 32, 33, 35
NGK's patented V-grooved spark plugs

2. **Perfect Ignition:**
   Protection for the catalyst
   The durability (service life) and efficiency of the catalyst are reduced by un-noticed misfires. V-Line spark plugs reduce the possibility of misfires and therefore protect the catalyst.

V-Line No. 20, 23
2 ground electrode spark plugs

3. **Peace of mind for the car driver:**
   Original Equipment-Quality
   The high quality of NGK Spark Plugs is endorsed by famous engine and car manufacturers throughout the world who fit them as original equipment. For example, Alfa, Audi, BMW, Fiat, Honda, Mazda, Mitsubishi, Renault, Rover, Saab, Seat, Toyota, VW, etc.

V-Line No. 30
4 ground electrode spark plugs

V-Line No. 31, 34
1 ground electrode spark plugs

V-Line Spark Plugs offer advantages of the whole line

V-Line No. 1, 21, 22, 24, 27, 29
3 ground electrode spark plug

V-Line No. 1, 21, 22, 24, 27, 29
3 Ground Electrode Spark Plugs for VW/Audi
NGK manufacture this type of spark plug specially for Volkswagen and Audi cars. Nearly all new models can be fitted with it (see NGK catalogue for full listing). They satisfy the service interval specified by the car manufacturer.

Technical Advantages
NGK Spark Plugs have a very wide heat range because they utilise superior insulator matgerials and a copper cored centre electrode. This ensures better cold starting and perfect ignition even under extreme engine operating conditions.

V-Line No. 2–12, 14–19, 28, 32, 33, 35
Spark plugs with V-groove in the center electrode

V-Line No. 2 – 12, 14 – 19, 28, 32, 33, 35
NGK's patented V-grooved spark plugs
The principle is technically simple but very effective. A V-groove is situated in the centre electrode of these V-Line spark plugs. This forces the spark to occur at the outer edge of the centre electrode where it is easier to ignite the fuel/air mixture. In addition, the voltage required to produce a spark is reduced. These two features give the benefit of improved ignitability.
NGK V-line spark plugs offer perfect ignition of the fuel/air mixture. Especially in modern low emission lean-burn engines, even under extreme operating conditions.

V-Line No. 20, 23
2 ground electrode spark plug

V-Line No. 20, 23
The principle of the spark plug for BMW is to "catch" the current which is leaking away over the deposits and create a spark. Spark discharge occurs between insulator and ground electrode. The carbon deposits are removed and the fuel/air mixture will be ignited.

V-Line No. 30
4 ground electrode spark plug

V-line No. 30
This is the long-life spark plug BKR6EQUP developed in close cooperation between BMW and NGK, which is equipped with a platinum middle electrode and 4 earth electrodes together with state-of-the-art semi-surface gap spark plug.
The semi-surface gap spark plug requires a special design of the insulator tip. This ensures that the ignition spark always only jumps between the electrodes which offer the most favourable conditions for reliable ignition of the fuel/air mixture.
In view of the fact that the ignition spark slides over the insulator tip first before it can jump over the air gap between insulator tip and earth electrode, any deposits accumulated here are removed immediately, reliably preventing any misfiring. This therefore guarantees optimum cold start behaviour at very low temperatures and greatest ignition reliability even when the vehicle is only driven for extremely short distances.
This new type of NGK spark plug is fitted in BMW engines from model year 1997. Retrospective approval has also been given for certain older BMW vehicles from model year 1987.

The V-Line No. 25

NGK has developed the double platinum spark plug PTR5A-13 for FORD models powered by ZETEC engines. The benefit of the platinum electrodes is to lower the required ignition voltage. As a result it is possible to increase the gap between the electrodes to improve combustion and give good idle stability. Better combustion also results in improved acceleration and lower emissions.

V-Line No. 25

The V-Line No. 26

Together with FIAT, NGK has developed the spark plug BKR6EKC. The "C" identifies it as a special spark plug for engines from the FIAT Corporation. The BKR6EKC works perfectly even under the most adverse conditions – from stop, start city driving with low combustion temperatures to maximum cylinder temperature experienced at full load. Test results show the specially designed double ground electrode plug guarantees superb ignition and satisfies Fiats service life requirements.

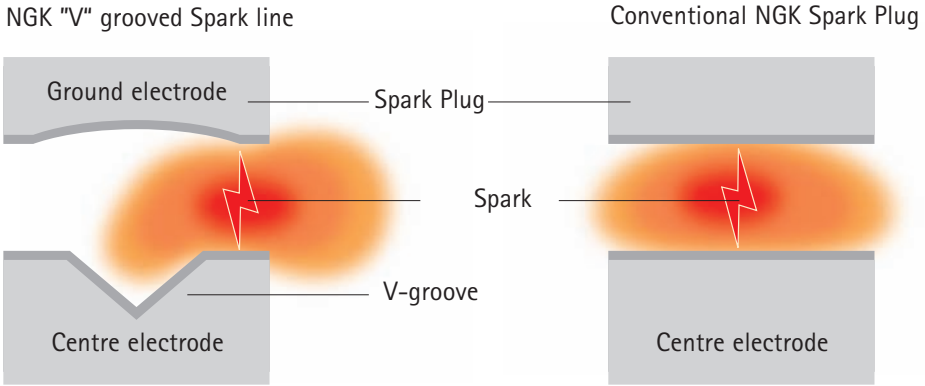

V-Line No. 26

The V-Line No. 31, 34

NGK has developed the double platinum spark plug PTR5D-10 for FORD models powered by ENDURA engines (V-Line No. 31). The benefit of the platinum electrodes is to lower the required ignition voltage. As a result it is possible to increase the gap between the electrodes to improve combustion and give good idle stability. Better combustion also results in improved acceleration and lower emissions.

V-Line No. 31, 34

Tightening torque of Glow plug

Body:

Thread diameter	Tightening torque
8 mm	8-15 Nm
10 mm	15-20 Nm
12 mm	20-25 Nm
14 mm	20-25 Nm
18 mm	20-30 Nm

Terminal:

Thread diameter	Tightening torque
4 mm (M4)	0.8-1.5 Nm
5 mm (M5)	3.0-4.0 Nm

Placing of motor identification numbers:

Alfa:	identification plate, engine block	
Audi:	service manual, engine block and	
	A2, A3, A4, A6, A8:	spare wheel pan, right
	100/200:	plate back side, inside left
	Avant:	bottom back in the middle
	80/90, Audi V8:	inside luggage space flap
	Audi Coupé:	luggage space right under insert of tray
BMW:	engine block	
Citroën:	on the engine block	
Daihatsu:	operating instructions, engine block	
Fiat:	identification plate, engine block	
Ford:	engine block, identification plate	
Honda:	engine block at passing to transmission	
Hyundai:	engine block	
Jaguar:	engine block, identification plate	
Kia:	engine block, transmission side	
Lada:	engine block, left side	
Lancia:	engine block, identification plate	
Mazda:	engine block (place see operating instructions)	
Mercedes:	engine block	
Mitsubishi:	engine block, identification plate at the engine hood and service manual	
Nissan:	engine block	
Opel:	engine block in high of transmission	
Peugeot:	engine block (aluminium plate)	
Renault:	engine block (middle), resp. aluminium plate	
Rover:	engine block in front of right, high of cylinder head	
Saab:	engine block, below	
Seat:	engine block, from model 93 like VW	
Skoda:	engine block near ignition distributor	
Subaru:	engine block near toothed-belt plate	
Suzuki:	engine block at passing to transmission	
	F = iron block G = aluminium block	
Toyota:	label at the toothed belt plate	
VW:	in service manual, engine block and	
	Käfer: front plate, left	
	Lupo, Polo, Derby, Golf, Scirocco, Jetta, Passat Limousine, Corrado, Vento, Bora:	back plate, inside left
	Golf Cabrio:	cross-tie behind rear seat bench, left
	Passat Variant:	spare wheel pan, back-side left
	Transporter:	cross member gear shift pattern
	LT:	B-column, left down
	Iltis:	bottom plate left beside first-aid box
	Taro:	cabin wall, inside left
Volvo:	**300, 700, 900, C, S and V serie:**	label on the front face cover
	all other models:	label on valve cover

This information is only valid for OE-installation of automobile manufacturer.

Conversion Chart
Vergleichsliste
Tableau de comparaison thermique
Tabla de conversión equivalencias
Jämförelsetabell
Převodní tabulky

Note: This chart is furnished as a guide. Due to differences in design, materials, etc., plugs produced by various manufacturers do not have exactly the same heat range. See recommendations sections for specific engine application.

Anmerkung: Diese Liste dient nur zur Information. Wegen der Unterschiede von Konstruktion, Werkstoffen usw. haben die Zündkerzen von verschiedenen Herstellern keinen miteinander übereinstimmenden Wärmebereich. Siehe unsere Empfehlungen für die richtige Anwendung der Zündkerzen.

Notes: Cette liste est donnée comme guide. A cause de la différence en dessin, matériels etc., les bougies d'allumage produites par divers fabricans n'ont pas exactement la même gamme thermique. Voir section d'affectations pour utilisation exacte.

Notas: Este cuadro se sirve de quia. Bujías que se producen por varios fabricantes no poseen exactamente el mismo alcance térmico debido a las diferencias en diseño, materiales etc. Véase sección de aplicaciones para el uso correcto.

Observera: Denna tabell är endast avsedd som väglendning.
Pá grund av avvikelser i utförande, material m.m. kan tändstift av olika fabrikat ej ha exakt samma värmetal. Se rekommendations-tabellen för respektive motor.

Upozornění: Převodní tabulky slouží pouze pro srovnávací účely. Zapalovací svíčky od různých výrobců nemají kvůli rozdílné konstrukci, použitému materiálu apod. srovnatelný rozsah tepelných hodnot. Pro správný výběr zapalovací svíčky je třeba se řídit doporučeními firmy NGK v aplikačních tabulkách tohoto katalogu.
